The Triple Action Skin Care

☐ ANTI - LICE

☐ ANTI - SEPTIC

☐ ANTI - SCABIES

What Is Scabies?

Scabies Is An Extremely Itchy Skin Disorder That Can Be Passed From One Person To Another. It Is Caused By An Infestation With A Parasite - The Scabies Mite. The Mite Lives On The Skin And Burrows Into It. Scabies Is Spread To Others Through Close Skin-to-skin Contact. It Is Easily Treated With An Insecticide Lotion Applied To The Skin. Two Applications Of Treatment Are Needed, One Week Apart.

How Do You Get Scabies?

You Need Close Skin-to-skin Contact With An Infected Person To Catch Scabies. This Is Because The Scabies Mite Cannot Jump Or Fly.

The Skin-to-skin Contact Needs To Be For A Reasonable Time To Catch The Mite. You Usually Need To Be In Skin Contact For 15-20 Minutes To Catch Scabies. Therefore, You Are Unlikely To Catch Scabies From An Infected Person By Casual Short Contact Such As A Handshake Or A **Hug**. The More Mites There Are, The Faster They Can Spread To Another Person.

How Do You Get Scabies?

Sometimes Outbreaks Of Scabies Occur In Places Such As **Nurseries** And **Residential Homes**, Where People Are In Regular Close Contact

Catch Scabies From **Bedding** And **Towels** Unless You Use Them Immediately After Being Used By Someone With Scabies.

What Are The Symptoms Of Scabies?

Itching. This Is The Main Symptom Of Scabies

Mite Tunnels (Burrows). These May Be Seen On The Skin As Fine, Dark, Or Silvery Lines They Most Commonly Occur In The Loose Skin Between The Fingers

Rash . The Rash Usually Appears Soon After The Itch Starts. It Is Typically A Blotchy, Lumpy Red Rash That Can Appear Anywhere On The Body.

Scratching. Scratching Due To Intense Itching Can Cause Minor Skin Damage.

Precautions : The above information on this page is not intended to be a substitute for professional medical advice. Do not use this information to self diagnose without consulting your doctor.
